The PAWSD Drought Management Plan sets trigger points for Voluntary drought procedures and four mandatory drought restriction stages from Low through Severe.

The trigger points for the Voluntary Drought Restrictions are any one of the following:

1. A curtailment order on Four Mile Creek prior to May 1.
2. A maximum Snow Water Equivalency (SWE) less than 75% of Median.
3. Reservoir levels with the addition of diversion flow less than 90%.

The Voluntary water reduction stage is intended to give the community advanced notice of developing drought conditions and to begin encouraging water conservation and voluntary water use reduction. The Voluntary stage does **not** trigger the drought surcharge or tier rate multipliers.

With a maximum Snow Water Equivalency (SWE) of less than 75% of Median as of April 6, 2026, the District is implementing Voluntary Drought Restrictions as of April 7, 2026. PAWSD will implement the next level of mandatory drought restriction stages as dry conditions continue, and these **do** trigger drought surcharges and/or tier rate multipliers.
